AIM:

To implement Playfair Cipher technique using C.

ALGORITHM:

- 1. Initialize the contents of the table to zero.
- 2. Get the length of the key
- 3. Get the key string from the user.
- 4. Insert each element of the key into the table.
- 5. Fill the remaining entries of the table with the character not already entered into the table.
- 6. Enter the length of the plaintext.
- 7. Get the plaintext string.

PROGRAM CODE:

```
#include<stdio.h>
int check(char table[5][5],char k)
{
int i,j;
for(i=0;i<5;++i)
for(j=0;j<5;++j)

OUTPUT:

```
Enter the length of the Key: 5
Enter the Key: hello

The table is as follows:
h e l o `
. . . . .
. . . . .

Enter the length of plaintext (without spaces): 5
Enter the Plain text: world

The replaced text (j with i): w o r l d
The cipher has to enter 0 bogus char. It is either 'x' or 'z'

Value of length is 6.
The final text is: w o r l d x

The Cipher text is: e ` e o e o
```
